

API Documentation

Unified API for interacting with multiple mobile payment networks (e.g., Orange, MTN). Includes endpoints for generating tokens, initiating payments, processing payments, and checking payment statuses.

API Reference

Get TPW Token

Process Payment

Check Payment Status

Environment Variables

base_url: API base URL

network: Payment network (mtn, orange)

secret_key: Secret key obtained on registration

bearer_token: Authentication token

auth_token: Network-specific token

Check Payment Status

Check the status of a payment transaction.

GET /api/{network}/get-status/{transaction_id}

Headers

```
{
  "Content-Type": "application/json",
  "Authorization": "Bearer {bearer_token}",
}
```

Response

```
// Success Response
{
  "amount": "1", // Transaction amount
  "confirmationStatus": "payment started", // Current status of the
payment
  "description": "COULD_NOT_PERFORM_TRANSACTION", // Additional status
information
  "orderId": "TPwid017", // Your system's order ID
  "payerPhone": "237673444815", // Payer's phone number
  "status": "FAILED", // Transaction status (INITIATED, PENDING,
FAILED, SUCCESSFUL)
  "transactionId": "11972264171" //Financial Transaction identifier
}

// Error Response
{
  "error": "not_found",
  "message": "Transaction not found",
  "status_code": 404
}
```

Authentication Required

This endpoint requires authentication. First obtain a token using the Get TPW Token endpoint, then include it in the Authorization header:

```
{
  "Content-Type": "application/json",
  "Authorization": "Bearer {bearer_token}",
}
```
